

Eta Projects is an independent Engineering Consultancy Practice. Our business objective is to provide a single integrated project team in the field of Mechanical and Electrical Engineering Services.

Eta Projects provides a multi-discipline design and project management service. We specialise in projects with complex systems and where services are critical to business, such as Telecommunications, Financial Institutions and NHS Health Care Service Providers. Modern building facilities require a high level of integration and co-ordination of the building services. This integration creates a facility that is efficient, flexible and user

friendly. This is achieved through the application of experienced personnel and understanding the Clients needs at the conception of the project.

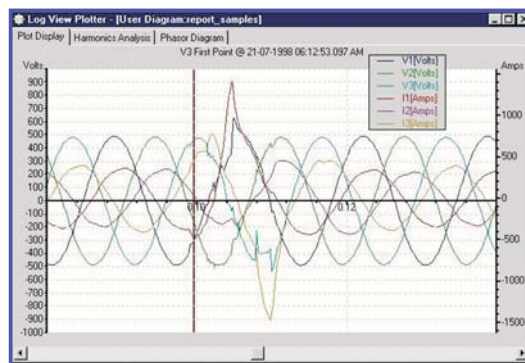

Eta Projects offer a Total Engineering Solution to meet requirements. We take full responsibility from initial brief stage, through design, implementation, commissioning and facility management. Project Management is a key focus. This includes resourcing staff for specialist roles. This operation is carried out as a seamless team using the resources available.

Our specialist services are specifically tailored to focus at corporate and strategic level on the design stage of projects. We specialise in business critical systems, where support services reliability and resilience is paramount. Our specialist core skills include design and management of: High Voltage, Low voltage, Standby Generation and Uninterruptible Power Systems (UPS) and associated Mechanical Services.

Eta Projects' core services are the provision of Electrical and Mechanical Design and Project Management of building services.

The company's commitment to detail design is suitable for both Commercial and Industrial Projects. Our skills are brought together to create a project team focussed on perfecting services integration. Teamwork, technology, innovation and extensive experience, combine to achieve cost effective solutions.

Our combined engineering skills offer a complete package to the Client, providing a service from concept to installation and commissioning.

Specialist services range from feasibility studies, strategic reviews, system resilience studies, planning of communications, masterplanning, auditing and design of electrical and mechanical services. This includes design, and implementation of computer room and telecommunication suites.

We also provide power quality, energy monitoring and energy reviews, using in-house monitoring facilities.

Eta Projects' principle aim is to enable our Clients to define and achieve their core business objectives. Our service brings added value and satisfaction through personal service and first class performance. This is achieved by understanding the Client's needs and applying our extensive experience in innovative design, efficient organisational skills and effective project teamwork.

Our approach is to work closely with our Clients to jointly develop the design brief and identify opportunities for cost effective solutions. We deploy integrated multi-disciplinary teams to facilitate the development of fully co-ordinated and integrated designs.

This approach ensures that account is taken of all services criteria and their interaction. It enables selection of the optimum methodology for procurement and implementation techniques most appropriate to achieving project completion on time and within budget.

We implement a rigorous management process, which encourages the development of a team environment. This allows creativity and team working to flourish. We use process improvement techniques to examine and exploit opportunities for continuous improvement.

Our aim is to provide cost-effective designs through the use of value engineering and management techniques and to ensure that our proposals offer value to our Clients. Our development of the brief, leads to a clear understanding and mutual agreement with the Client of their operational requirements.

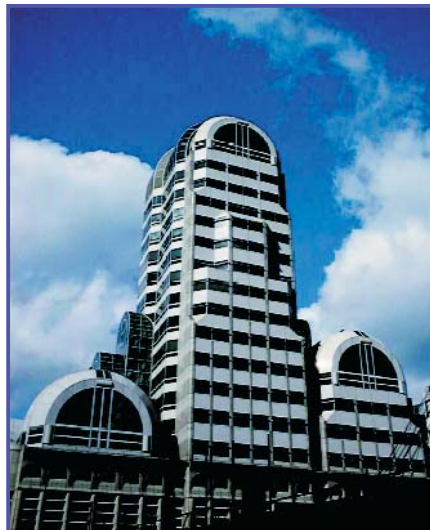

Eta Projects' proposals are reviewed both internally and with our Client at each design stage. This ensures that all options are fully explored and that the solutions adopted are cost-effective over the life of the project.

Design reviews are carried out to focus on providing the optimum design solutions. This ensures that the design is technically robust, appropriate and meets the business needs of each individual Client.

Projects are carried out to comply with CDM requirements. We have extensive experience with Local Authority Approvals, i.e. Planning, Environmental, District Surveyors and Fire Officer requirements.

In summary

Eta Projects provide the following:

- ▼ Electrical, Mechanical, Public Health
- ▼ Design Consultancy
- ▼ Design Reviews
- ▼ Feasibility Studies
- ▼ Risk and Resilience Studies
- ▼ Tender Package Documentation
- ▼ Project & Facilities Management
- ▼ Implementation and Commissioning
- ▼ Power Monitoring & Energy Management
- ▼ Computer Rooms
- ▼ Professional Institute Accreditation
